

An Alternative to Citrix and VMware

OVD Enterprise is an affordable alternative to Citrix and VMware. It lets any organization move business-critical applications to the cloud and deliver them to users on any device or Web browser.

OVD Enterprise removes the cost and complexity associated with other solutions. It provides an alternative that is fast and easy to implement, simple to manage and offers a great user experience.

Best of all, OVD Enterprise is typically half the cost of Citrix and VMware.

Fast and Easy Implementation

OVD Enterprise is fast and easy to deploy. It installs in minutes, not days, and you won't need expensive consultants to manage lengthy implementation.

OVD's modern multi-tenant design requires less hardware overhead and integrates with today's IT standards, including any hypervisor, LDAP or MS Active Directory service, and network storage.

A Great User Experience on Any Device

Say goodbye to slow session and application launches. OVD provides a fast application user experience without the performance lags and annoying disruptions that impact other solutions. Users can access their apps on any desktop, mobile, or browser-enabled device. You can also use low-cost thin clients like Raspberry Pi to support full remote productivity with a familiar Windows or Linux virtual workspace.

Unified Management

Administrators can manage every aspect of OVD – users, applications, tenants, and servers – through OVD's single Web-based management console. Convenient automation and user management features allow administrators to publish and manage applications quickly from one centralized location.

Lower Cost of Ownership

OVD is available as an all-inclusive OPEX subscription plan with no costly upfront perpetual licenses. Overall, OVD Enterprise can be deployed for half the cost of solutions like Citrix or VMware.

Inuvika OVD Enterprise	Citrix Virtual Apps and Desktops (XenApp / XenDesktop)	VMware Horizon/Horizon Apps
✓ Use Windows and Linux apps together within the same session on desktops, mobile devices, Chromebook, Raspberry Pi thin clients, and HTML5 browser devices.	Requires a Linux sub-session to access Linux apps.	Windows apps only. Linux requires a dedicated VDI session.
✓ Deliver apps together within a shared Windows or Linux desktop, seamlessly integrated into the user's local desktop and Start menu, or within a Web portal.	Limited by device and apps.	Limited by device and apps.
✓ Installs in hours or less, with no need for costly certifications and training for staff.	Lengthy and complex.	Lengthy and complex.
